Teamwork and Collaboration

Active Listening

Organization and Time Management

Excellent Communication

INTERESTS

Gaming, Cycling, Swimming, Travelling

EDUCATION

Software Engineering
Bayero University, Kano
08/2021 - Present

PERSONAL PROJECTS

Weather App (08/2022 - 08/2022)
- I built a weather application to display the weather conditions of over 200k cities with a change of background depending on the weather condition and time of day of the particular city.
- I made use of HTML, CSS, JavaScript(ES6), and API.

GitHub Finder (08/2022 - 08/2022)
- A Github profile finder that allows users to search for any authenticated Github account holder, and display related information such as Company name, Blog name, repository count, latest followers, and more.
- I made use of HTML, Bootstrap, JavaScript(ES6), and the GitHub API.

Loan Calculator (07/2022 - 07/2022)
- An application that can be useful for financial workers to quickly calculate loan payments and total interest.
- I made use of HTML, Bootstrap, JavaScript.

Temperature Converter (12/2021 - 01/2022)
- An app that converts celcius to kelvin and Fahrenheit, and vice versa, and also displays the formula used to calculate it.
- I made use of HTML, CSS, and JavaScript.
